

## CYBER SECURITY HEALTH CHECK

Cyber security has become a core business issue and increasingly businesses are keen to understand their current cyber security exposure. Our Cyber Security Health Check is designed to root out cyber issues within your business and provide detailed recommendations to ensure that cyber security is resilient and robust. This protects brand and reputation, and enables value creation.

GOVERNANCE

RISK  
MANAGEMENT

ORGANISATION

TECHNOLOGY  
CONTROLS

### ASSESSING YOUR ORGANISATION FROM THE INSIDE OUT

Using a combination of business risk analysis and structured control assessment, our consultants explore your entire network, verifying that the correct security and technical controls are in place to prevent, detect and respond to a cyber-attack. Going beyond technology, we also assess your organisational structure and resourcing model to determine if it is fit for purpose, and verify that your processes are robust and repeatable.

### CYBER RISK MITIGATION

Once we have rigorously assessed your security controls, we translate our findings into a business risk report that is easy for the Board and Senior Leadership Team to understand. As an example, we will rate your business's exposure to a personal data breach and the resultant reputational and financial impacts. Together with these findings we present clear, implementable recommendations for cyber business risk mitigation.

ASSESSMENT

### BUILT ON EXPERIENCE

Our consultants have worked extensively in industries that have invested heavily in cyber security and leverage their skills and experience to secure your business

### BUSINESS RISK DRIVEN

By acutely focusing on the specific risks your organisation faces, we ensure that cyber security spend is both targeted and effective

### TAILORED TO YOUR BUSINESS

We tailor our Health Check to your business, ensuring we identify cyber business risk wherever it exists, be that in the cloud, on prem or at home with remote workers

## WHAT

- In depth cyber risk assessment
- Organisational & governance review
- Cloud, network and IT systems rigorously assessed
- Comprehensive in-depth report
- Full set of tactical & strategic recommendations

## HOW

- Delivered by consultants with 10+ years cyber experience
